

Haider Suliman joined Spectrum Integrated Solutions in 2014. He is Spectrum's IT manager, and is responsible for all technology aspects for projects that involve networking, internet and CCTV. Suliman also directs Spectrum's in-country daily operations as they pertain to government offices and agencies.

Before joining Spectrum, he applied his expertise to a variety of organizations. The International Red Cross employed him to manage their IT needs after 2003, when they funded the development of a water treatment plant in Baghdad.

Suliman held the position of IT manager for one of the largest security providers for the US Government in Iraq. During this time, he was responsible for the programming of radios, communication and tracking systems and networking devices for locations throughout Iraq. He also applied his skills to one of Iraq's largest private internet providers, serving as the Owner and Operations Manager. His ability to address the technological challenges presented during this time allowed for the provider to facilitate the demands of various government and commercial entities.

Suliman lent his talents to one of the largest oil and gas companies in Iraq as a private contractor, implementing a system for the provision of work visas for foreign employees. His efforts helped address the needs of the company while simultaneously ensuring compliance with Iraq's immigration services. His ability to meet and overcome the unique demands presented by each of these projects has allowed him to become a valuable resource for Spectrum's clients as they examine their own specific IT requirements.

*Haider Suliman holds a Bachelor of Science Degree in Information Technology and Computer Science.*
